

SUBSPECTION
ICDM UNITS
PROVIDE EFFICIENT
REMOTE CONTROL
CAPABILITY

Intelligent Control and Display Module

The ICDM unit enables the functions of the impressed current cathodic protection system to be monitored and controlled remotely

Features of the ICDM include

- Unit can be configured to monitor and control one or more Impressed Current Cathodic Protection (ICCP) power units
- Fully digitised for power unit compatibility
- Power units and ICDM interconnection only requires 'screened and twisted pair' cabling
- Safety key prevents unauthorised changes to the operating parameters of the ICCP system
- Easy integration with the ship's main computer system
- Remote audible and visual alarms are incorporated within the main ICCP control system including Power Unit/ICDM 'communications lost' alarm
